

Deck System

Creating a cut-out inside your deck.

STEP 1

Choose an existing Floating Foundation Deck Plan.

STEP 2

Draw desired opening to be removed. If the desired cutout is more than 18 inches from the edge of the cut out, additional piers will be needed.

STEP 3

Remove unneeded materials, and add two end boards perpendicular to the support boards. If the opening is smaller than the distance between the existing rows, additional blocking boards may be needed.

STEP 4

Attach decking to support boards and end boards.
